In Wine Country, Dogs Are Sniffing Out Threats to $325 Cabernet

In Chile’s Casablanca Valley, Labrador retrievers are sniffing their way around barrel-making company, TN Cooper’s. The dogs, “more accurate and effective than modern technology” can detect harmful chemical compounds in the barrel wood that could contaminate the wine within.

EcoVineyards project set to benefit winegrape growers across South Australia

The EcoVineyard concept incorporates native insectary plants to create biodiverse ecosystems in and around vineyards. These plants support populations of insect predators, which contribute towards biocontrol of vineyard pests and may ultimately lead to reduced input costs and the use of chemicals.
